

LILIN are one of the World's largest CCTV manufacturers. With expertise in Digital Recording, High Speed Domes and Infra Red Cameras, LILIN are committed to providing customers with the latest technology and perfect customer service, based on the philosophy of 'Creativity, Progress & Excellence'.

Lilin products offer an extensive range of products from lenses through to the latest technology in digital recording, allowing total system design from one supplier.

DVR Range

This latest range of Digital Video Recorder maximises drive space by compressing video to small file sizes, you can expect to achieve 42 days per Terabyte in normal recording settings at 100 frames per second.

The main monitor output has a wide range of display options with simple drag and drop camera placement, and the SVGA output is compatible with most PC TFT monitors producing exceptional video quality. Most importantly, it is very simple to copy recordings to any of the back up media.

Fast Dome Camera

The High Speed Domes offer unrivalled picture quality, a wealth of features and are extremely simple to install and operate. The Domes provides a solution for even the most demanding applications.

The internal clock allows automated operation for many functions; activating external alarm inputs, reverting to a home position, switching the IR cut filter and commencing tours.

These domes are superbly engineered mechanicals for unrivalled reliability. We have incorporated every feature ever requested to ensure you never need to use another dome.

Infrared Camera

This is a new approach for LILIN. The idea of combining long range IR LED illumination in a cable managed housing is an industry first. When a day/night camera and an IR corrected lens is installed inside it creates a very powerful but neat solution.

Lilin use 2 different types of high power LED to provide an even beam coverage, these are mounted on a special aluminium PCB which is wired in parallel for long life and continuous operation - even if one LED fails. Expect 20,000 hours maintenance free operation (5 years) and low current consumption.

Vandal Proof Series

Increasingly popular, this range of vandalproof cameras are weatherproof and designed to resist the most determined attacks.

These camera's are available with a number of difference lenses: colour, day/night, fixed lens and infra-red.
